Professional Summary — Results-driven Software Engineer with 2 years of experience architecting and delivering high-performance web applications. Specializes in modern Angular development (v14-20) and Node.js backend integration. Proven track record of engineering scalable frontend architectures, implementing Angular Server-Side Rendering (SSR) for advanced SEO optimization, and developing real-time interactive systems. Adept at driving product-level engineering, optimizing rendering performance, and delivering seamless user experiences in fast-paced production environments.

Core Competencies — Angular Development · Full Stack Development · SSR & SEO Optimization · Real-Time Applications · REST APIs · Performance Optimization · Scalable Frontend Architecture · Agile/Scrum · CI/CD

Technical Skills

Frontend Core Angular (v14-v20), TypeScript, JavaScript (ES6+), HTML5, SCSS, RxJS, NgRx, Responsive UI

Architecture Angular SSR, Lazy Loading, Angular Guards, Interceptors, SEO Optimization, State Management

Integrations Stripe, Xendit, Firebase Cloud Messaging (FCM), Google Maps, WebSockets, Socket.io

Backend Node.js, Express.js, MongoDB, SQL, JWT, Route Protection

Tools/Platforms Git, GitHub, Postman, Jira, Firebase, VS Code, Chrome DevTools, CI/CD

Professional Experience

Rebuild Technologies

June 2024 – Present

Software Engineer (Frontend & Node.js)

- **Led** major frontend modules of a comprehensive Rental Management Platform, developing a scalable Angular-based admin panel.
- **Implemented** Angular Server-Side Rendering (SSR) to ensure maximum SEO optimization and rapid initial page load performance.
- **Built** dynamic onboarding and multi-step form validation systems using Angular Reactive Forms, improving onboarding experience and reducing registration friction.
- **Integrated** Firebase Cloud Messaging (FCM) and Socket.io to deliver real-time chat functionality and live system updates.
- **Implemented** secure authentication flows including Google Login, Facebook Login, and JWT-based Route Protection with Angular Guards.
- **Developed** reusable modular Angular components and services utilized across both Host and Customer web apps, significantly accelerating cross-team development velocity.
- **Integrated** 30+ RESTful APIs using **Node.js** and **Express.js**, seamlessly coordinating backend data delivery with frontend API caching.
- **Refactored** legacy monolithic frontend modules into modern module-based **Angular 19** architectures, implementing Lazy Loading to reduce bundle size and optimize change detection.

Apptunix

February 2024 – May 2024

Backend Engineer Intern (Node.js)

- **Optimized** 25+ critical RESTful APIs, improving data retrieval efficiency and reducing overall application load times.
- **Streamlined** backend database integration using SQL and NoSQL databases, enabling the platform to handle concurrent user traffic efficiently.
- **Assisted** with basic backend debugging, participated in daily agile stand-ups, and supported senior developers using Postman and Chrome DevTools.

Key Engineering Projects

Vehicle Rental Marketplace [Live Demo]

Tech Stack: Angular 20, RxJS, Node.js, Express.js, Socket.io, Stripe, SSR, Firebase

- **Developed** a high-performance web marketplace for vehicle rentals, utilizing **Angular 20** and **RxJS operators** to build seamless user journeys.
- **Integrated** robust API connections, handled complex authentication flows with Angular Interceptors, and implemented secure payment gateways using **Stripe** and **Xendit**.
- **Delivered** fully **SEO-friendly** pages using **Angular SSR**, alongside real-time KPI dashboards utilizing **ngx-charts** and **WebSockets**.

E-commerce & Rental Services Admin Platform [GitHub]

Tech Stack: Angular 18, Node.js, MongoDB, RxJS, Angular Material

- **Programmed** a highly scalable, data-intensive admin interface using **Angular 18**, capable of tracking thousands of real-time inventory records.
- **Automated** administrative workflows by leveraging dynamic routing, reactive forms, and seamless backend coordination.

Ride-Hailing & Logistics Admin Dashboard [GitHub]

Tech Stack: Angular, Node.js, Socket.io, Firebase, Google Maps API

- **Directed** the comprehensive Angular-based admin panel for a taxi and parcel delivery platform, enabling seamless management of drivers and fleet operations.
- **Implemented** administrative workflows including driver document verification, real-time platform performance tracking, and dynamic revenue monitoring.
- **Constructed** dynamic pricing modules, allowing administrators to configure rates seamlessly for passenger rides and parcel shipping deliveries.

Education

Master of Computer Applications (MCA)

Lovely Professional University — 2023 – 2025

Bachelor of Computer Applications (BCA)

GB Pant Memorial Government College — 2019 – 2022
